Product Data Sheet

2505 HAZE FREE GOLD

General Description

Highly aggressive formulation to remove all types of stubborn plastisol ink (haze and ghost images) that remains on Textile screens following emulsion removal. 2505 effectively lifts haze and imbedded ink from the mesh, then emulsifies and dissolves the ink constituents; resins, binders, pigments, plastizers, etc. The solution suspends these constituents so reattachment to the mesh surface is prohibited, thus allowing for water-rinse removal. 2505 is an excellent degreaser, as it also removes dirt, residues and sizings. 2505 is versatile in its application. It can be applied by brush or spray.

Advantages

Completely & efficiently removes all haze images from screen in as little as 10 minutes.
Fabric Friendly
Degreases Fabric
Meets SARA III Requirements
Low Vapor Pressure 4.49mm Hg @ 20C
Low Evaporation Rate

Directions

Wear gloves to protect hands. Wear eye protection before use.
Apply 2505 directly to both sides of a WET screen starting from the center and working to the sides in a circular fashion. Let stand for no more than 10 minutes.
To eliminate image, remove with high pressure water spray starting from the bottom of screen and working to top moving in a side to side motion.

Consult **MSDS** for Safety and Handling Information
